Conclusions and Annual Summary (7/1/07 – 6/30/08):

- Since it is drawn from claims, the first three quarters of data is likely the most correct since it contains claim run out.
- The most outstanding difference is the utilization between Block Grant and Medicaid; 83.04 % of all admissions were Block Grant.
- All admissions were greater in Block Grant for each modality except Adolescent Level III.5 which was higher for Medicaid. This trend held throughout the year.
- After pulling out Social Detox at the recommendation of the Committee, the overall Lengths of Stay (LOS) in Medicaid and Block Grant are very similar with only **1.62 LOS difference** for the year average.
- The modality with the highest utilization (excluding Social Detox) in both funding sources is Level III.3 Intermediate Adult Residential for the year.
- In examining the detail by region and funding source table, it is noted that the region with the greatest number of admissions is Wichita when Social Detox is excluded.
- The region with the longest LOS is Kansas City. (Social Detox Excluded)
- The region with the shortest LOS is Northeast. (Social Detox Excluded)

Preliminary Recommendations to Committee: It is recommended to the Committee that data trending continue and reporting on all objectives be included in this report. It is also recommended that the data from modalities with longer lengths of stay be analyzed for cause. **It is recommended by the Committee that this aggregate analysis and the ValueOptions report where the data was pulled be shared at the SRS Regional QI meeting and posted on the ValueOptions website with more instruction and clarification by ValueOptions on how viewer’s interpret the report detail.**

Date Presented to SQC: 8/26/2008

BY: Kim Brown

**Addiction and Prevention Services
